

ABHISHEK SHARMA

Senior Software Engineer — Ruby on Rails, Elixir/Phoenix, Cloud & AI-Augmented Engineering

email4abhisheksharma@gmail.com | +91 8090908724 | Lucknow, India (Remote)

linkedin.com/in/abhisheksharma91 | github.com/abhsss96

PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years of experience building and scaling high-availability backend systems in Healthcare SaaS — EVV compliance platforms, fiscal management systems, and home care workforce management tools processing ~270K visits/day across 27 agencies (tenants) in ~8 US states. Core stack: Ruby on Rails and Elixir/Phoenix, with deep hands-on experience in GraphQL API design and evolution (Absinthe), PostgreSQL, Redis, AWS (ECS, S3, Lambda), Docker, Kubernetes, and Datadog APM. Elixir work includes Phoenix LiveView interfaces for real-time deployment monitoring; earlier career includes production payment gateway integrations (Stripe, Braintree, PayPal, Billplz). Recent work spans cross-codebase API contract unification across three versioned backend monoliths, performance tuning from app server configuration through pod autoscaling, and stabilizing an org-wide CI/CD migration to GitLab CI + GitHub Enterprise. Proven ownership of backend services end-to-end — from technical design through deployment, observability, and iteration. Daily AI-augmented engineering practitioner with Claude Code and Cursor. 5+ years fully remote on US time zones.

TECHNICAL SKILLS

Domain Expertise: Healthcare SaaS, EVV Compliance, Multi-Tenant Architecture, RESTful API Design, API Versioning & Contract Unification, CI/CD, System Design, Microservices

Compliance: HIPAA & PHI-handling training completed annually, 5 consecutive years (2021–2026), certificates held; day-to-day PHI-aware engineering

Languages: Ruby, JavaScript (ES6+), Elixir, Python (3.11+), CoffeeScript, Shell Script

Frameworks: Ruby on Rails, Phoenix, Phoenix LiveView, Stimulus, Hotwire, Turbo, Node.js

Databases: PostgreSQL, MySQL, MongoDB, Redis, SQLite

Cloud & DevOps: AWS (EC2, S3, Lambda, ECS, CloudWatch), GCP, GKE, Docker, Kubernetes, Heroku, Azure

CI/CD: GitLab CI, GitHub Enterprise, GitHub Actions, CircleCI, Capistrano

App Servers & Performance: Puma (threads/workers), Phusion Passenger (pool sizing), HPA, pod resource tuning

APIs & Background Processing: Grape, GraphQL (Absinthe), OpenAPI, REST APIs, Sidekiq, Resque, Oban, Kafka (production producer/consumer), Amazon SQS

Monitoring & APM: Datadog, Sentry, Scout, HoneyBadger, Grafana

Testing: RSpec, Capybara, Selenium WebDriver, Cucumber (Gherkin), BDD, TDD

AI-Augmented Workflow: Claude Code (CLI), Cursor (CLI) — agent autonomy boundaries explicitly configured

AI / LLM (personal projects): RAG pipelines, embeddings, vector search (ChromaDB), local LLMs (Ollama/Mistral), OpenAI API integration (streaming), prompt assembly

CLI & Developer Tooling: Python CLIs/TUIs (Typer, Textual), shell scripting, Neovim plugin development, PyPI packaging

WORK EXPERIENCE

GlobalLogic Inc — Senior Software Engineer (Consultant)

June 2024 – Present | Remote (contracting for HHAeXchange, US)

- **Stabilized** an organization-wide CI/CD migration from GitHub + CircleCI to GitHub Enterprise + GitLab CI — diagnosed and repaired broken deployment pipelines across all microservices and restored developer workflow continuity throughout the transition.
- **Driving cross-codebase API contract unification** across three versioned backend monoliths (legacy, old, new) so a multi-tenant consumer receives identically-structured responses regardless of which microservice version a tenant runs against.

- **Primary maintainer of an in-house Elixir-based Kubernetes deployment tool** that sits between DevOps and engineering — own bug fixes, new features, and incident response since DevOps cannot directly work on the Elixir codebase.
- **Performance engineer across infrastructure and application layers** — tune Puma threads/workers, pod resource limits, and HPA scaling thresholds; trace residual latency to upstream services and adjust Phusion Passenger pool sizing.
- Lead and mentor a cross-functional engineering team of 5+ engineers — define hiring criteria, conduct technical interviews, establish onboarding workflows, and drive the team's technical direction.

NSR Information Systems (HHAeXchange / Annkissam) — Senior Software Engineer

May 2021 – June 2024 | Remote

- Delivered full-stack features across EVV compliance, fiscal management, and onboarding platforms — contributing across the entire product portfolio.
- Improved performance on large-scale multi-tenant applications using Datadog, Scout, and custom smart reporting — reducing system downtime and customer noise.
- Spearheaded major technical upgrades and migrated Rails to newer versions, maintaining platform stability and performance.

RayMn & BR Technologies Pvt Ltd — Senior Software Engineer

July 2017 – May 2021 | Full-time

- Built and maintained high-performance web applications, improving average response time by 20% through query optimization, caching, and background jobs.
- Integrated payment gateways across client projects — Braintree (Geniuss Pass) and Billplz (Anypay) — in production Rails applications.
- Mentored a team of junior developers through code reviews and pair programming — resulting in a 30% reduction in production bugs.

Intelliswift Software, Inc. — Software Engineer

Feb 2016 – July 2017 | Full-time

- Delivered multiple client-facing Rails applications with distributed remote teams, adhering to Agile ceremonies and maintaining consistent delivery cadence.
- Integrated Stripe payment processing for ParkSmart, a client parking-management product — still live in production today.

RayMn & BR Technologies Pvt Ltd — Rails Developer

August 2013 – Feb 2016 | Full-time

- Initiated and led Ruby on Rails projects from scratch — admin panels, RESTful APIs for mobile apps, and automated deployment pipelines.
- Integrated PayPal payment processing for Planiversity, a client web application — still live in production today.
- Contributed to open-source Ruby gems published on RubyGems.org.

PROJECTS

Sorted by lines of code added.

Self Direction Portal — HHAeXchange / Annkissam

Rails 7 · Grape API · OpenAPI · Hotwire · PostgreSQL · Redis · Sidekiq · Docker · Datadog · Form.io | Hosted on AWS ECS

- Built the Timesheets module end-to-end (6,993+ lines) in a large Rails 7 monolith — sourcing all timesheet data through upstream microservice API calls with no local persistence, plus comprehensive RSpec test coverage.
- Driving cross-codebase API contract unification across three backend microservice versions — eliminating per-version conditional logic and converging all backends on a single generalized API contract.
- Building end-to-end paperless onboarding automation — Form.io dynamic forms generate PDF packets, prefilled from upstream microservices, routed through e-signature workflows.

- Integrated Datadog APM across all environments — ECS task definitions, Sidekiq tracing, and tenant-context middleware for full distributed tracing.

13,446 lines added · 1,323 removed · 25 commits · Mar 2024 – Apr 2026

eTimesheets Plus — EVV & Timesheet Management Platform

Rails · Grape API · PostgreSQL · PostGIS · Redis · Docker · Resque | Hosted on Kubernetes

- Developed and enhanced a multi-state EVV compliance platform used by 14+ home care agencies — shift tracking, timesheet management, and regulatory reporting.
- Designed and built a comprehensive Shifts API (v2) with batch shift entry, EVQ exception/reason code handling, and shift field repositories — a 4,500+ line feature enabling full mobile app integration.
- Built a multi-state aggregator system for California with configurable enrollment logic and a Redis caching layer tied to client configurations.

9,400+ lines added · 56 commits · Sep 2022 – Jul 2025

Loading Dock — Healthcare EVV Integration Platform

Rails · Grape API · PostgreSQL · Redis · Resque · Sentry · Capistrano | Hosted on AWS · Actively maintained

- Diagnosed redundant inter-service API calls as the primary bottleneck in the visit ingestion pipeline; implemented a job-scoped Redis cache deduplicating upstream calls to one per Employee/Consumer per import. Reduced the twice-weekly production batch from 14–16 hours to 2–3 hours (~80% reduction).
- Built ARIS enrollment data ingestion pipeline and procedure-code mapping logic resolving billing discrepancies across Sandata service codes.
- Engineered an external API access layer enabling third-party clients to consume Loading Dock APIs securely.

5,311 lines added · 2,357 removed · 33 commits · Aug 2022 – Feb 2026

Evvie — Healthcare / Workforce Management Platform

Elixir · Phoenix · Ecto · PostgreSQL · GraphQL (Absinthe) · CircleCI · Docker | Hosted on Kubernetes

- Built and optimized a Cache V2 API powering offline support for mobile devices — parallel async fetches across modules stitched into a single fast API response; configured Kubernetes HPA to match the workload.
- Designed multistate support for financial institution entries for cross-state regulatory compliance.

~3,300+ lines added · ~700+ removed · 25 commits · Apr 2025 – Jul 2025

FMS Gateway — Fiscal Management Services Platform

Elixir · Phoenix · Absinthe (GraphQL) · Ecto · PostgreSQL · Oban · Finch | Hosted on Kubernetes

- Built a GraphQL API for ShiftField queries using Absinthe — resolvers, type definitions, and full VCR cassette test coverage.
- Diagnosed and resolved a production HTTP connection bottleneck by tuning Finch connection pooling with configurable ENV variables — fixing token expiration issues under production load.

2,588 lines added · 45 commits · Oct 2022 – Mar 2026

KubeStat Umbrella — In-House Kubernetes Deployment Management Platform

Elixir · Phoenix LiveView · GraphQL (Absinthe) · Kazan · Kubernetes · GKE · EKS | Hosted on Kubernetes

- Primary maintainer of an in-house Elixir-based deployment tool sitting between DevOps and engineering — own bug fixes, new features, and incident response.
- Built and maintained Phoenix LiveView interfaces for real-time deployment monitoring — live status views, log views, and tracking across Kubernetes-deployed services.
- Refactored the Kubernetes node affinity system across 20+ deployment templates — consolidated duplicated scheduling logic into a centralized helper module, removing ~1,400 lines of redundant configuration.

1,242 lines added · 2,351 removed · 28 commits · Jun 2025 – Apr 2026

Paperworkr — HR / Employee Onboarding Platform

Rails · MySQL · HelloSign API · Devise · Pundit | Hosted on GCP

- Implemented the I-9 form end-to-end with multi-preparer support, Supplement A integration, and HelloSign e-signature template management across staging, demo, and production.

- Designed a scalable per-client HelloSign template architecture; fixed a security vulnerability restricting access to unarchived programs only.

~940 lines added · 17 commits · Jun 2023 – Aug 2024

Ivrie — IVR Visit Collection Platform

Elixir · Phoenix LiveView · Ecto · PostgreSQL · Amazon SQS (platform ingestion) | Hosted on Kubernetes · Actively maintained

- Maintain a multi-tenant Elixir/Phoenix platform collecting visit data from IVR (telephony) devices; the platform ingests visits via Amazon SQS queues.
- Own multi-tenant configuration management with tenant-level isolation; entire UI runs on real-time Phoenix LiveView.

Obsidian RAG — Local Retrieval-Augmented Generation Tool (Personal Project)

Python 3.12 · Ollama (Mistral 7B) · ChromaDB · Typer CLI · GitHub Actions · Fully local (no cloud APIs)

- Built a fully local RAG pipeline answering plain-English questions grounded in a personal Obsidian markdown vault — no data leaving the machine.
- Designed a layered architecture with no framework abstractions: three-tier chunking (heading → paragraph → fixed-window with overlap), ChromaDB embedding/retrieval, and prompt assembly for a local Mistral 7B via Ollama; 11 unit tests with CI on every push.

Personal project · github.com/abhsss96/obsidian-rag

ChatGPT-CLI — Terminal UI for OpenAI Models (Personal Project)

Python 3.11 · Textual (TUI) · OpenAI streaming API · Published to PyPI (MIT)

- Built a keyboard-driven terminal chat client with streaming token output, mid-stream cancellation, per-conversation system prompts, and live token-usage display.
- Packaged and published to PyPI (pip install chatgpt-cli) with clean module separation across UI, API, config, and storage layers.

Personal project · PyPI · github.com/abhsss96/ChatGPT-CLI

EDUCATION

Bachelor of Technology (B.Tech) — Computer Science & Engineering, UPTU (Uttar Pradesh Technical University), 2009–2013

AWARDS & CONTRIBUTIONS

- Rated “Outstanding” (top band) in July 2026 annual performance review at GlobalLogic.
- 4 HHAX Success Awards in 18 months for outstanding technical contributions and delivery across project milestones.
- 3 consecutive client appreciation awards at GlobalLogic, recognizing consistent delivery excellence and strong client relationships.
- Authored notes-nvim, a project-scoped note-taking Neovim plugin with fuzzy search, daily notes, and Telescope integration; published as open source.
- Built a shell-based automatic time tracking system on TimeWarrior — auto-starts/stops based on tmux session, git branch, and directory.
- **Published 6 Ruby gems on RubyGems.org — 43K+ total downloads** — Google Maps/Places/Search API wrappers, a static map image generator, and database-cloner-rails; deprecated gems maintained with proper migration notices. rubygems.org/profiles/abhsss96
